Project Title: WORM Subject Planner

Description: WORM Subject Planner is a mobile platform application made to help students organize their plans and notes according to subjects or categories. It will contain a scheduler, calendar, notes pad, and doodles pad specially designed for the user's convenience.

UI Guide: The screens and actions involved in the group's chosen scenario – Add Notes will be demonstrated below.

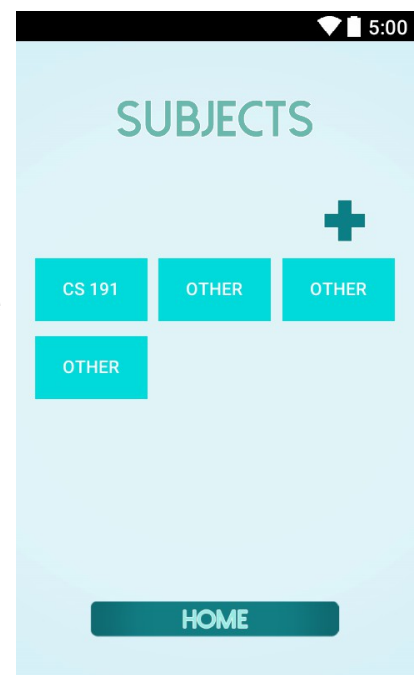

Screen 1: Home

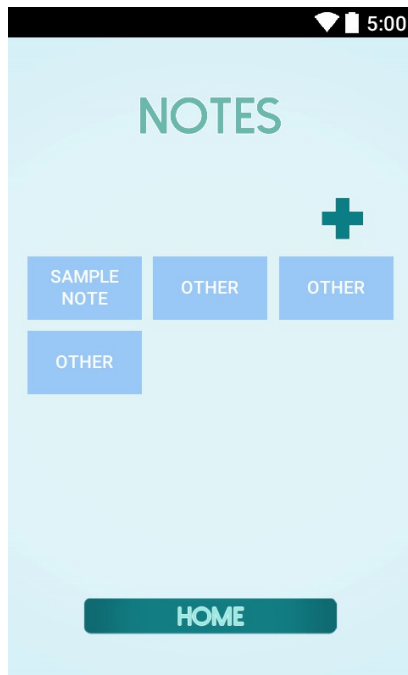

This is the main screen of the application. In here, we can see different buttons for Calendar, Tasks, Notes, and Customization. From here we press the Notes button to start our Add Notes scenario.

Screen 2: Subjects

This is the next screen the user will see after he presses the Notes button. This screen shows the different subjects that the user has. The user must choose a certain subject and he will be brought to a new screen. He can also go back to the Main screen by pressing the Home button at the bottom.

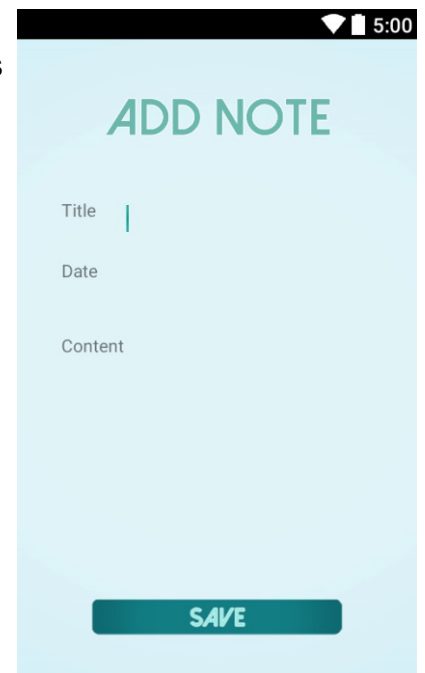

Screen 3: Notes

This contains the list of notes for the user's chosen subject. To add a new note, press the plus button below the Notes header. Like the previous screen, the user can go back to the Main screen by pressing the Home button.

Screen 4: Add Note

This screen will allow the user to create a new note by inputting the title, date, and content. If he wants to discard his note, he may simply press the back or return button of his phone. If he wants to save his note, he must press the Save button at the bottom of the screen.

Screen 5: View Note

After pressing the Save button from the Add Note screen, the user will be redirected to a new window showing his newly-created note. He can return to the Home screen after he is finished viewing his note by pressing the Home button at the bottom of the screen.
